

Core Principles

of Five Elements

Principled Authorship

AI-generated content is never the student's own work and must be cited as a source.

Critical Evaluation

AI outputs reflect the biases and limitations of their training data. Students must question and verify all AI-generated information.

Strategic Inquiry

Effective AI use requires strategic questioning. Students should design and refine prompts as a form of inquiry-based learning.

Enhance Intellect

AI should enhance human thinking, not replace it. Students use AI to support their learning process while ensuring authentic work.

Societal Analysis

Students must analyze AI's ethical and societal impacts on individuals and communities, learning about AI as a transformative force, not just with it as a tool.
